## **EXAMINER'S STATEMENT OF REASONS OF ALLOWANCE**

### ***Continued Examination Under 37 CFR 1.114***

[1] A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 11, 2008 has been entered.

### ***Amendments***

[2] This office action is responsive to the claim and specification amendment received on April 11, 2008. Claims 44-63 are pending; Claims 1-43 cancelled.

### ***Allowable Subject Matter***

[3] Claims 44-63 allowed.

[4] The following is a statement of reasons for the indication of allowable subject matter:

Regarding Claim 44 (and equivalently Claims 52, 57), while the prior art discloses a camera to obtain an image of a cargo space, an image evaluator to recognize lines within the image, and to evaluate the lines for indications of cargo; and a projection pattern image library comprising a projection pattern image; wherein the image evaluator is configured to compare the image to the projection pattern image, the prior art does not disclose a system for detecting a presence of cargo in a container, comprising: an ambient light sensor to determine if an ambient light level within the container exceeds a threshold value; a camera to obtain an image of an interior of the container; an edge detection module configured to recognize lines formed by

Art Unit: 2624

intersection of floor and walls of the container, and to compare the recognized lines to a plurality of images of empty cargo containers within an edge image library, and upon failure to match the recognized lines to an image within the edge image library, to within a threshold level of differences, to assume that cargo is present within the container; a laser unit, controlled by a projection pattern generator and operated only when ambient lighting is below the threshold value, to create a laser projection pattern in the container; and a laser pattern evaluation module to evaluate the laser projection pattern to determine if cargo is present in the container.

### ***Conclusion***

[5] The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: US 4249207 A; US 4750197 A; US 4871252 A; US 5093869 A; US 5808670 A; US 5953448 A; US 5963664 A; US 20020044682 A1; US 20020085747 A1; US 20020125435 A1; US 6476812 B1; US 6532299 B1; and US 20040233284 A1.
